

Micro Weather Pro™ Carrying Cases

For Instruments and Tripod

These carrying cases safeguard your Micro Weather Pro weather station, sensors, and tripod both during transport and storage. The MWP carrying cases are made of rugged and durable materials.

The instrument case is made of a lightweight LLDPE (Linear Low Density Polyethylene) shell that is impenetrable. It provides maximum impact resistance as well as UV and solvent resistance.

The custom foam interior is die-cut to fit our instruments insuring they will not be damaged from movement or vibration during transport. The case is 22" x 22" x 12" with six secure latches. The case, with instruments, weighs approximately 50 lbs. It has wheels and a handle to make transport easy.

The tripod can be transported in its rugged nylon carrying bag. It has two wide handles designed to make carrying easy and comfortable.

*The hard case meets MIL STD-C-4150-J and
MIL STD 810-F*
